

## **Net Zero Policy -**

pfmmedical is moving towards net zero in our logistics and supply chain and aiming to become ISO14001 accredited by 2025.

**Packaging** - we minimise the plastic we use in our products at every opportunity and we are far from the governments threshold to pay Plastic Packaging Tax with less than 1 tonne of plastic imported since the tax was introduced on April 1st 2022. All of the packaging we use in the UK to transport products to our customers is recyclable cardboard and paper, we also use paper tape to secure our products whilst in transit.

**Corporate Social Responsibility** - We are gradually moving our fleet over to electric cars, our head office in Germany are producing their own green electric now meaning they are even able to charge their fleet in a bid to move to a global net zero position. Our office stationary and welfare products are all made from recycled materials and sourced from companies who are also committed to being net zero.

**Logistics** - When deciding upon which courier we use for our logistics, a company with a clear sustainability strategy is a mandatory requirement which is why we use DHL who have a long term commitment to becoming net zero and have many targets & innovations already in place.

**Carbon Footprint** - Reducing our carbon footprint is vital for the successful vision of pfmmedical as a group. To name a couple of the initiatives we have in place our manufacturing plant in Switzerland is run on 100% local hydroelectricity. They also support [www.southpole.com](http://www.southpole.com) by offsetting every litre of fuel purchased. Each of the pfmmedical locations are considering how best they can move forward in the most sustainable way.

**Managing Directors: Gemma Borgert, Frank Klinker**
